

A Fan, Like No Other
Engineered Elegance

A wish, want, crave, covet mean to have a longing for comfort.

Industrial strength and commercial appeal blend to create a remarkable ceiling fan. Designed to cover large areas, Axiom Fans move a ton of air, consume minimal energy, and look good doing so. The whisper quiet motor provides stealthy air movement to any space.

A fan, like no other. A fan, designed specifically to move air with a non-disruptive, yet continually powerful flow.

10' from tip-to-tip, the Axiom Ceiling Fan was designed through evolution from a basic fan blade (with minimal coverage) to now completely revolutionary blade - designed for equal air flow from hub to tip.

High ceilings and large spaces are ideal environments for Axiom Fans. Applications are endless with a little creativity. Have a space that lacks air movement? Contact us!
